AI PM CAPSTONE · ATLIQ TECHNOLOGIES

AtliQ Sales & CRM Assistant

A sales memory that closes the loop — it catches every promise and client ask, tells founders what to do today, and updates the CRM when they act.

Presented by
Eshita Rastogi

Live prototype
atliq-sales-crm-assistant-eshita-rastogi.vercel.app

THE PROBLEM

AtliQ doesn't lack leads. It lacks memory.

$410k

of known pipeline was **waiting on AtliQ**, not on the client, in the July 2026 snapshot.

FinEdge $95k · NovaPharma $80k · ShopSwift $55k · Meridian $45k · ClearPath $40k · AgroLink ~$37k · HealthFirst $30k · VoltEnergy $28k

0 / 40 CRM records with a next follow-up date

3 wks FinEdge — our biggest deal — waited for a reply after compliance cleared

2× "Update the CRM same day" was agreed — April and July — and failed both times

DISCOVERY · WHO WE BUILT FOR

The founder-seller who sells between meetings

KARANDEEP · CEO & FOUNDER-SELLER

"I answer emails on my phone between meetings and it never gets into the system. By the time I'm at a laptop it's gone."

Composite of Bhavin, Dhaval and Karandeep · secondary user: Jay, sales exec

Thinks

"I might lose deals because I can't remember earlier points or follow up."

Feels

Overwhelmed and pressured; guilty when warm clients have to chase us.

Says

"We find out what's urgent by accident." · "Half of these will go cold."

Does

Promises on the phone, pushes CRM updates to "later", searches the inbox mid-meeting.

DISCOVERY · 5 WHYS

From "we're losing revenue" to the real root cause

Why 1 Revenue slips → **follow-ups and client asks don't happen** ($410k waiting on AtliQ)

Why 2 Nobody sees them coming → **the CRM is out of date** (0/40 follow-up dates, wrong stages, 5 leads missing)

Why 3 Context is lost → **information arrives scattered** and is typed in days later, if at all

Why 4 No time to update → **selling happens on the phone**; data entry pays nothing back, so discipline failed twice

Why 5 The CRM is built on **manual entry**, while the real signals live in conversations nobody has time to read back

Root cause: the signals that drive revenue — asks, promises, deadlines, revisits, cross-sells — stay buried in unstructured conversations, with no owner. The fix is a system that comes to the data, not more discipline.

DISCOVERY · WHAT THE DATA SHOWED

Revenue leaks in five repeatable patterns

01

Dropped promises

"I'll send the case study" — said, never sent.

ByteBridge · CloudNine · VoltEnergy

02

Unanswered asks

The client asked a direct question. Nobody replied.

FinEdge $95k · Meridian $45k

03

Buried deadlines

"By the 15th" sits inside paragraph four of an email.

ShopSwift 15 Jul · HealthFirst 14 Jul · NovaPharma 24 Jul

04

Lost deals that came back

"Revisit in Q3" — marked Lost, never revisited.

Quantia · ClearPath · Kaveri

05

Missing leads & duplicates

5 leads only in inboxes; Meridian entered twice.

5 missing · 1 duplicate

Every pattern is a **signal hidden in text** — exactly what a language model can read, and a rule-based CRM can't.

THE OPPORTUNITY · PROCESS MAPPING

10 steps, 5 pain points, where AI fits

Input	1	2	3	4	5	6	7	8	9	10	Output
New opportunity	Receive	Log lead	Qualify	Discovery	Proposal	Meetings	Follow up	Negotiate	Close / lost	Grow	Revenue & growth

2 · Log lead

Organizes + Connection — capture from any note, flag duplicates

6 · Meetings

Finds + Writes — minutes, promises and dates from the recording

7 · Follow up

Plans & Recommends — ranked next best actions, draft replies

9 · Close / lost

Finds + Connection — catch "revisit in Q3" on lost deals

10 · Grow

Finds + Recommends — spot cross-sell signals in won accounts

Cards we rejected

Autonomous · Commands · Facial recognition — AI never sends, changes or decides on its own

THE OPPORTUNITY WE CHOSE

"When I'm between meetings, help me know what I owe each client today — and keep the CRM true without me typing it — so no warm deal goes cold."

Why AI, not another rule

The signals are written in plain language. "Revisit in Q3" or "can you send by Friday" can't be caught by a form field or a filter.

Discipline was tried twice. The fix has to **remove** the typing, not ask for more of it.

AI does

✓ Reads emails, notes and recordings

✓ Pulls out asks, promises and deadlines, with the source quote

✓ Ranks what to do today

✓ Drafts replies and minutes

AI never

✕ Sends anything to a client

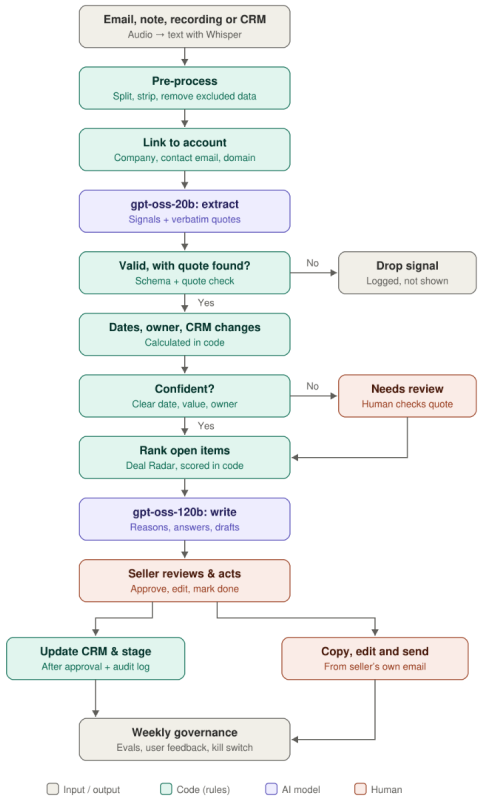

✕ Changes a stage or value on its own

✕ Merges records or deletes data

✕ Invents a price, date or commitment

THE SOLUTION

A sales memory that closes the loop

AI reads & writes

Extracts asks, promises, dates and profiles; writes minutes and drafts. Every item carries its source quote.

Code does the maths

Due dates, ranking, quote checks and duplicate flags run in code — repeatable and testable.

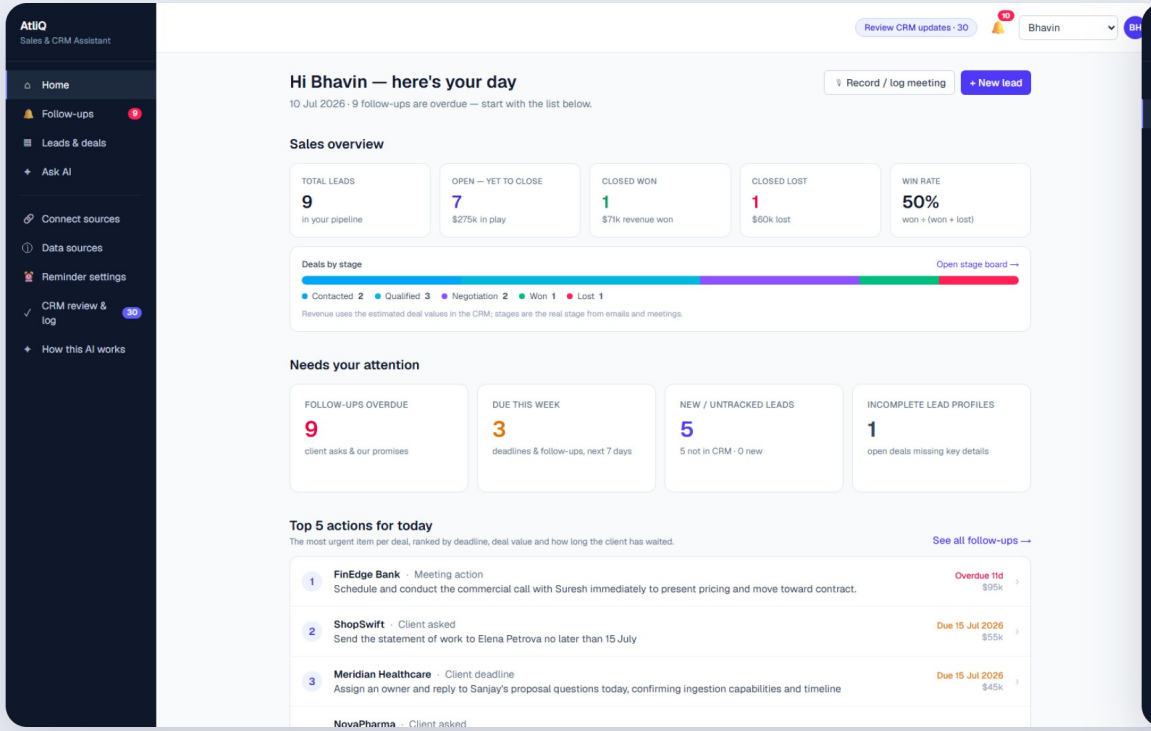

Humans decide

Mark done, move stage, send, merge — one tap each, always by a person.

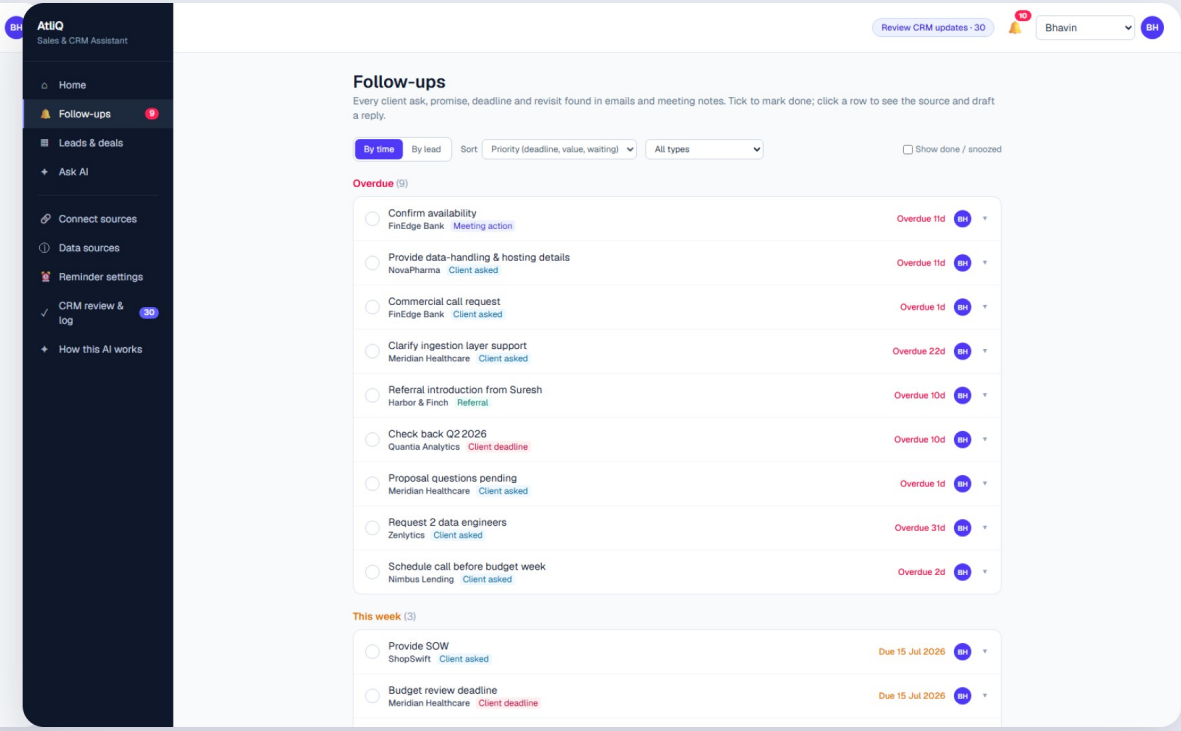

Groq · gpt-oss-20b & 120b · Whisper · Next.js on Vercel

WALKTHROUGH 1 · START THE DAY

Open the app, know what to do today

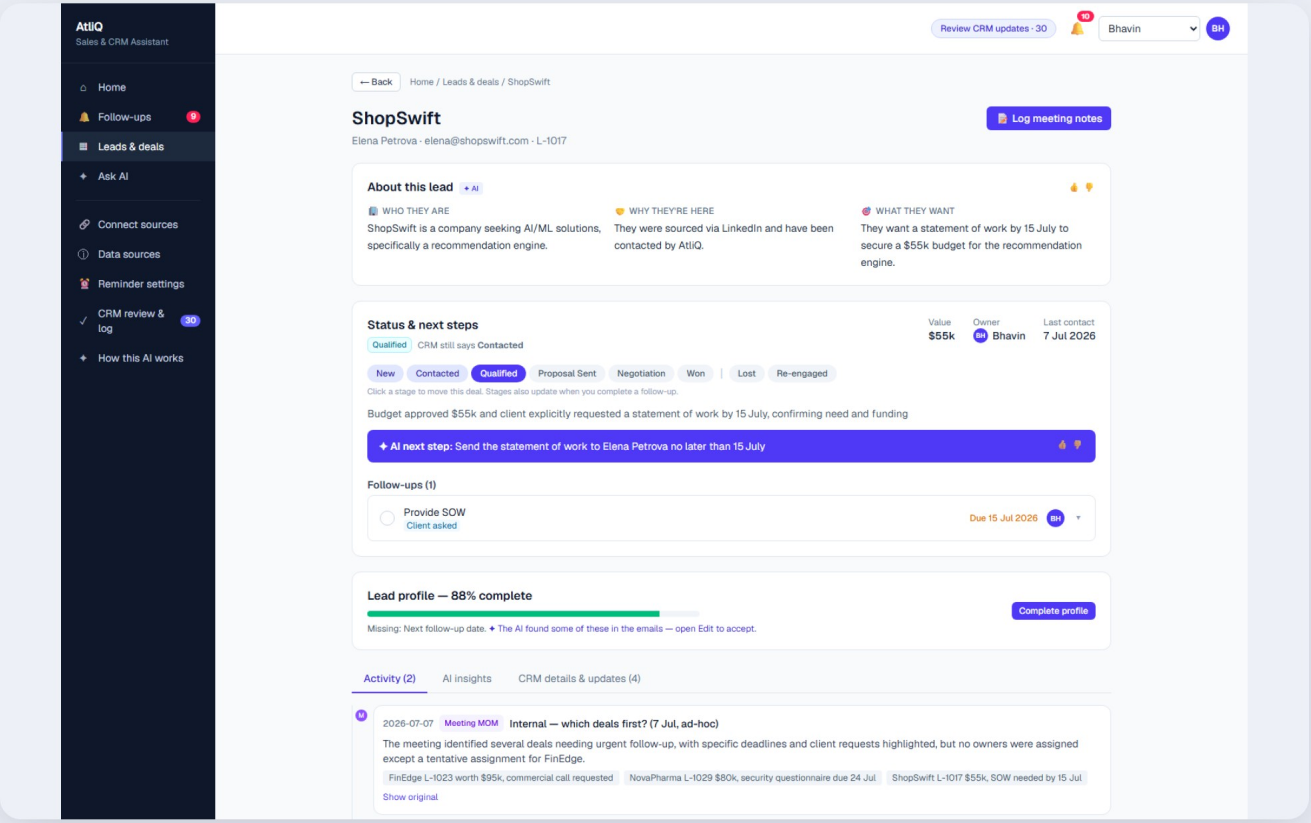

Home: pipeline, overdue, due this week, new leads — then the top 5 actions, ranked.

Follow-ups: by time or by lead. Each shows the quote it came from — done, snooze or remind me.

WALKTHROUGH 2 · WORK A DEAL

One tap closes the loop — and the CRM updates itself

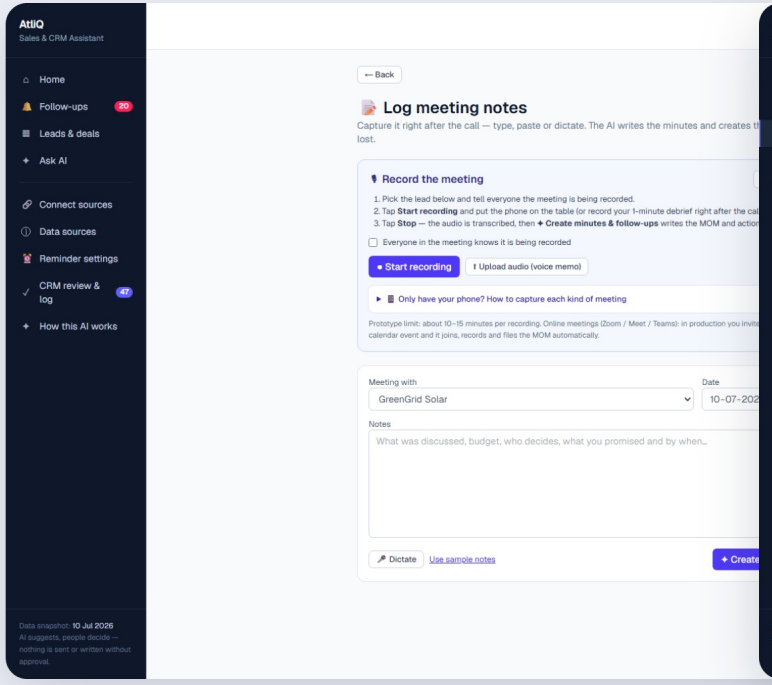

AtliQ Sales & CRM Assistant · 10 · Live prototype

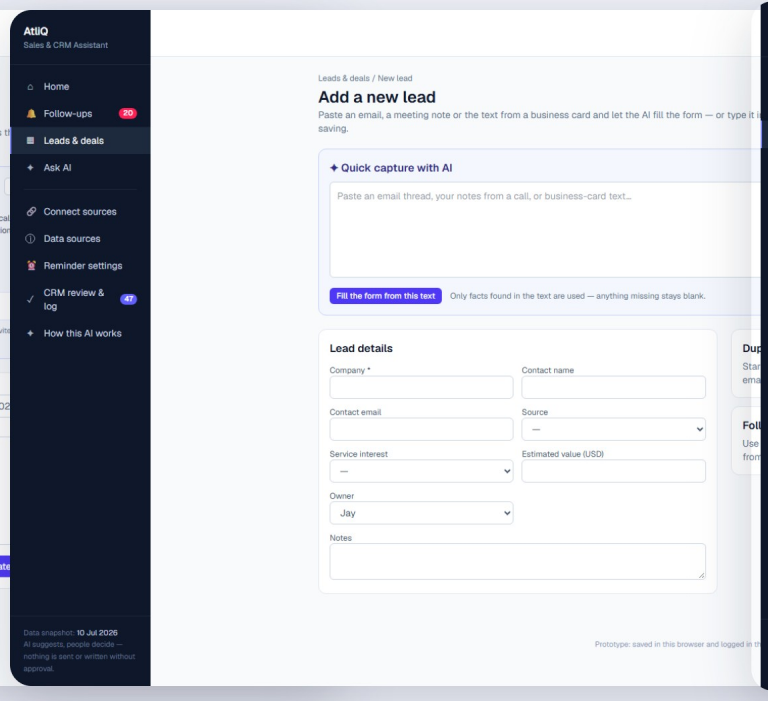

1. **ShopSwift, $55k.** AI summary, who they are, and the buried ask: SOW by 15 Jul.
2. **Draft the reply.** AI writes it; anything it doesn't know shows as [TBD].
3. **Mark done: "SOW sent".** Action and date are logged; stage moves Qualified → Proposal Sent.
4. **Profile completeness** shows what's missing — fill it in place.

WALKTHROUGH 3 · CAPTURE WITHOUT TYPING

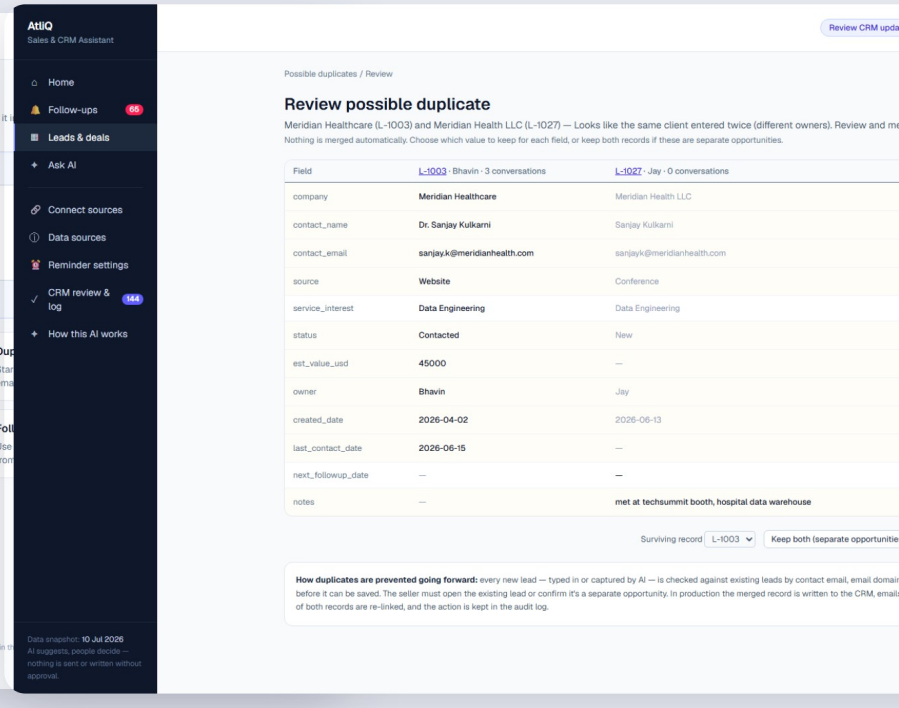

Talk, paste or record — the CRM fills itself

Log a meeting. Record, upload or dictate. The GreenGrid demo returns minutes, $22k and 2 follow-ups with dates.

Add a lead. Paste an email or business card; AI fills the fields and warns about likely duplicates.

Merge duplicates. Side by side; a person picks what to keep. AI flags, never merges.

SUCCESS METRICS

One North Star, backed by trust and safety

NORTH STAR

% of follow-ups done on time

~20%	→	≥60%	→	≥80%	→	≥90%
Today (est.)		Beta		Launch		Steady state

Business

Reply to client asks in < 2 business days

Pipeline review prep: 2 hrs → < 10 min

0 clients chasing us per month

Trust & adoption

≥ 70% of AI suggestions accepted

≥ 80% 👍 on AI output

Founders open it daily

Guardrail (must hold)

0 actions taken without approval

≥ 98% source quotes accurate

0 invented prices, dates or promises

PROOF · EVALUATION

Tested against AtliQ's own answer key: 12 / 12 pass

30/30
Known asks & promises found

124/124
Source quotes verified word for word

5/5
Missing leads found in inboxes

4/4
Buried deadlines dated correctly

#1
FinEdge ranked top of the list

Top 6
ShopSwift #2 · Meridian #4 · HealthFirst #5 · NovaPharma #6

What the evals caught

Hallucination: a draft invented "HL7" and a "UAT" date. Fixed with a [TBD] rule and a numbers check.

Ranking: ShopSwift first came out at #87. Reweighted → #2.

False alarm: GlobalMart was flagged as "silent" while AtliQ owed the action. Rule fixed.

RISKS & GUARDRAILS

9 failure modes, each with a guardrail in the build

Grounding

Hallucination → every item needs a verbatim quote; code drops any it can't find

Invented facts in drafts → [TBD] for unknowns; numbers checked against source

Wrong dates → AI quotes the phrase, code works out the date

Human control

Autonomous action → AI never sends, moves a stage or deletes

Wrong merge → duplicates flagged, merged only by a person

Over-trust → "✦ AI" labels, sources one tap away, 👍 / 👎 feedback

Privacy & security

Prompt injection → email text is data, never instructions

Data exposure → API key server-side only; input size limits

Recording consent → record only with the client's agreement

Designed with **Microsoft's 18 HAX guidelines** — an in-app "How this AI works" page explains what it can and can't do.

COST & VALUE

$2.31 a month to protect a $410k pipeline

Monthly AI running cost (Groq)

gpt-oss-20b · extraction, capture, minutes	$0.31
gpt-oss-120b · summaries, Q&A, drafts	$1.03
New-lead capture	$0.17
Whisper · meeting transcription	$0.80
Hosting · Vercel hobby tier	$0.00
Total	**$2.31**

~$391

saved per month vs $393.75 of founder time spent on manual follow-up tracking — **99% cheaper**

Same workload on Claude would cost about **$27.76/month** — still cheap, kept as the quality fallback.

WHAT MAKES IT DIFFERENT

Not a chatbot on top of a CRM — a sales memory that closes the loop.

Proof, not vibes

Every item shows its source quote

Closes the loop

Mark done → stage moves, CRM updates

Phone-first capture

Record or dictate; minutes in seconds

Catches what CRMs miss

Lost-deal revisits, silent threads, missing leads

Evaluated

12/12 against the real answer key

Human in control

HAX-designed; AI suggests, people decide

Next on the roadmap

→ Shared database & CRM write-back

→ Live Gmail / Outlook connection

→ Call-in note-taker & meeting bot

→ WhatsApp & push reminders
